Giancarlo Paganin - DASTU

Alessandro Rogora - DASTU

PROJECT

BIOLOOP FACTORY aims to apply tools to enhance local waste and surplus, generating value through internally developed productions and involving socially vulnerable people in training labs and workshops.

An Atlas of Energy and Matter flows, the Periurban Eco-Social Material Library, the low-tech toolkit of the Polinomad laboratory and the VITO social plant nursery are essential to develop materials and support experimental urban agriculture productions, activating circular and innovative practices.
